SUBJECT INDEX

Adaptive control of central heating systems: part 1: optimum start time control 89
Alternating group explicit (AGE) matrix iterative method, The 256
Application of a hindcast model to waves in Bass Strait, Australia 2
Application of nonlinear optimization to water quality 438
Approach to resolving the parameter sensitivity problem in system dynamics methodology, An 315
Approach to the analysis of the interaction of surface waves with depth-varying current fields, An 432
Atmospheric dispersion model of removal mechanism with integral term 82
Bending and torsional resonances in structures subject to ground motion 195
Calculation of heat transfer rates in fully turbulent wass flows, On the 281
Computer simulation of some migration processes in a two-dimensional cellular space 322
Contribution to the deterministic modelling of circadian rhythms in cell proliferation activity, A 177
Decay of mean and turbulent quantities in vertical forced plumes 301
Efficiency of uni-directionally patrolled machines, The 380
Efficient boundary element method for two-dimensional transient wave propagation problems, An 411
Energy shift for a compressed hydrogn atom, The 146
Evaluating solide angles using contour integrals 69
Generalized design approach to solution of non-convex quadratic programming problem 291
Implicit enthalpy solution for phase change problems with application to binary alloy solidification, An 110
Incremental stochastic model for the temporal distribution of peak traffic demand 389
Input-output based approach to the short-term evaluation of transportation plans, An 127
Integrated modelling and numerical treatment of freeway flow 447
Iterative time-scale separation of synchronous machines 133
Lagrangian model of air pollutant dispersion, A 104
Mathematical modelling of baroclinic waves and fronts in the ocean, The 11
Mathematical simulation of hydrocyclones 242
Mixed boundary element solution for three-dimensional convection-diffusion problem with a velocity profile 402
Model of oxidation in pyritic mine wastes: part 3: import of particle size distribution 417
Modelling data uncertainty in growth forecasts 62
New crack elements for boundary element analysis of elastostatics considering arbitrary stress singularities 357
New method of digital simulation for an aircraft gas turbine engine control system, A 458
Numerical evaluation of a multi-stream pseudo-random number generator 219
Numerical investigation of the turbulent flow-field at the stern of a body of revolution, A 45
Numerical solution of the generalized Laplace equation by the boundary element method 393
On the accuracy of the pseudocompressibility method in solving the incompressible the incompressible Navier-Stokes equations 35
Optimization of closure operation in a tidal basin during a storm-surge 19
Perturbation-boundary integral equation method for transient dynamics of nonlinear elastic materials 296
Predictions and measurements of laminar flow over two-dimensional obstacles 23
Pulse propagation in a viscoelastic tube containing a viscous liquid 215
Quasimolecular modelling of turbulent and nonturbulent vortices 465
Rectilinearly orthotropic annular disc under uniform pressure 397
Resource allocation in light of a stochastic stream of opportunities 384
Review of mathematical modelling of aircraft cabin fires, A 162

Review of parallel finite element methods on the DAP, The 330
Scrap reduction in the extrusion process: the case of an aluminium production system 141
Seepage underneath barrages with downstream subsidiary weirs 423
Sigma-constant acceleration method in nonlinear analysis 341
Simulation of infinite composite reservoirs 185
Software for the Frobenius method for the solution of nonlinear differential equations 229
Solution of Burgers' equation for large Reynolds numbers using finite elements with moving nodes 211
Some computational aspects of BEM simulation of cathodic protection systems 371
Steady-state model of stirred-tank electrolysers with simultaneous heat and mass transport 272
Subcooled void model, A 264
Thermal behaviours of buildings under random conditions 349
Transient boundary element formulation for linear poroelasticity 285
Two-dimensional time-dependent model for surface shear and buoyancy-driven flows in domains with large aspect ratio, A 364
Use of rotation numbers to predict the incipient folding of a periodic orbit 117

BOOK REVIEWS

An Introduction to Identification, by J. P. Norton 234
BETECH 85, Proceedings of the 1st Boundary Element Technology Conference, South Australian Institute of Technology, Adelaide, Australia, November, 1985, edited by C. A. Brebbia and B. J. Noye 152
Building Models for Conservation and Wildlife Management, by A.M. Starfield and A. L. Bleloch 474
Chaotic Dynamics and Fractals, edited by M. F. Barnsley and S. G. Demko 234
Developments in Boundary Element Methods: Vol. 4, edited by P. K. Banerjee and J. O. Watson 73
Differential Equations, by H. Reinhard 233
Finite Element Methods for Nonlinear Problems, (Proceedings of the Europe-US Symposium, The Norwegian Institute of Technology, Trondheim, Norway, August 12–16, 1985), edited by P. G. Bergan, K. J. Bathe, and W. Wunderlich 234
Hydrodynamic of Ocean Waves: Energy Utilization, edited by D. V. Evans and A. F. De. O. Falcao 72
Introduction to Three-Dimensional climate modelling, by W. M. Washington and C. L. Parkison 233
Mathematical Models in Applied Mechanics, by A. B. Taylor 72
Notes on numerical Fluid Mechanics, vol. 14: Finite Approximations in Fluid Mechanics, edited by E. H. Hirschel 151
Probabilistic Properties of Deterministic Systems, by A. Lasota and M. C. Mackay 151
